10.9 The query_string query 353

Fields in a query_string query 354 ▪ Default operators 355
The query_string query with a phrase 356

10.10 Fuzzy queries 357

10.11 Simple string queries 357

10.12 The simple_query_string query 358

11 *Compound queries 361*

11.1 Sample product data 362

The products schema 362 ▪ Indexing products 363

11.2 Compound queries 364

11.3 The Boolean (bool) query 365

The bool query structure 366 ▪ The must clause 367
Enhancing the must clause 368 ▪ The must_not clause 370
Enhancing the must_not clause 371 ▪ The should clause 373
The filter clause 378 ▪ Combining all the clauses 381
Named queries 382

11.4 Constant scores 384

11.5 The boosting query 386

11.6 The disjunction max (dis_max) query 388

11.7 The function_score query 389

The random_score function 391 ▪ The script_score function 392 ▪ The field_value_factor function 393
Combining function scores 394

12 *Advanced search 397*

12.1 Introducing location search 398

The bounding_box query 398 ▪ The geo_distance query 399
The geo_shape query 400

12.2 Geospatial data types 401

The geo_point data type 401 ▪ The geo_shape data type 402

12.3 Geospatial queries 404

12.4 The geo_bounding_box query 405

12.5 The geo_distance query 409

12.6 The geo_shape query 410

12.7 The shape query 412
