aggregation), which calculates the result by taking input from the other aggregations set by the `buckets_path` variable. In this case, it is fed by the aggregation called `cappuccino_sales`, which lives under the `sales_by_coffee` sibling aggregation.

If you are puzzled about `buckets_path` or pipeline aggregations, hang in there. We look at them in practice in the next few sections.

13.5.4 Available pipeline aggregations

Knowing whether a pipeline aggregation is a parent or sibling helps us easily develop these aggregations. Tables 13.1 and 13.2 list the pipeline aggregations and their definitions.

Table 13.1 Parent pipeline aggregations

Name	Description
Buckets script (`buckets_script`)	Executes a script on multi-bucket aggregations
Bucket selector (`bucket_selector`)	Executes a script to select the current bucket for its place in the multi-bucket aggregation
Bucket sort (`bucket_sort`)	Sorts the buckets
Cumulative cardinality (`cumulative_cardinality`)	Checks recently added unique (cumulative cardinality) values
Cumulative sum (`cumulative_sum`)	Finds the cumulative sum of a metric
Derivative (`derivative`)	Finds the derivative of a metric in a histogram or date histogram
Inference (`inference`)	Finds the inference on a pretrained model
Moving function (`moving_function`)	Executes a custom script on a sliding window
Moving percentiles (`moving_percentiles`)	Similar to `moving_function`, except it calculates in percentiles
Normalize (`normalize`)	Calculates the normalized value of a given bucket
Serial difference (`serial_diff`)	Calculates the serial difference on a metric

Table 13.2 Sibling pipeline aggregations

Name	Description
Average (`avg_bucket`)	Calculates the average value of the sibling metric
Bucket count (`bucket_count_ks_test`)	Calculates the Kolmogorov–Smirnov statistic over a distribution
Bucket correlation (`bucket_correlation`)	Executes a correlation function
Change point (`change_point`)	Detects the dips and changes in a metric
Extended stats (`extended_stats`)	Calculates multiple statistical functions
