Listing 12.12 Indexing point and multipoint shapes

```
PUT myshapes/_doc/1                    <-- Indexes a point
{
  "name":"A point shape",
  "myshape":{
    "type":"point",
    "coordinates":[12,14]
  }
}

PUT myshapes/_doc/2                    <-- Indexes a multipoint
{
  "name":"A multipoint shape",
  "myshape":{
    "type":"multipoint",
    "coordinates":[[10,13],[13,16]]
  }
}
```

The code places a point and a multipoint, both 2D shapes, into the `myshapes` index. Figure 12.7 shows the two shapes: the line and the point.
