7.4 Custom analyzers 258

Advanced customization 260

7.5 Specifying analyzers 261

Analyzers for indexing 261 ▪ Analyzers for searching 263

7.6 Character filters 265

HTML strip (hmtl_strip) filter 266 ▪ The mapping character filter 267 ▪ Mappings via a file 268 ▪ The pattern_replace character filter 269

7.7 Tokenizers 270

The standard tokenizer 270 ▪ The ngram and edge_ngram tokenizers 271 ▪ Other tokenizers 274

7.8 Token filters 274

The stemmer filter 275 ▪ The shingle filter 275 ▪ The synonym filter 276

8 *Introducing search 280*

8.1 Overview 281

8.2 How does search work? 282

8.3 Movie sample data 283

8.4 Search fundamentals 285

The _search endpoint 285 ▪ Query vs. filter context 286

8.5 Anatomy of a request and a response 288

Search requests 288 ▪ Search responses 290

8.6 URI request searches 291

Searching for movies by title 292 ▪ Searching for a specific movie 293 ▪ Additional parameters 293 ▪ Supporting URI requests with Query DSL 294

8.7 Query DSL 294

Sample query 295 ▪ Query DSL for cURL 295 ▪ Query DSL for aggregations 296 ▪ Leaf and compound queries 296

8.8 Search features 297

Pagination 298 ▪ Highlighting 299 ▪ Explaining relevancy scores 301 ▪ Sorting 304 ▪ Manipulating results 307 Searching across indexes and data streams 310
