script object 173
script part 179
script_fields object 309
script_score function 392–393
scripted fields 308–309
scripted updates 173–177
  adding conditional update scripts 175
  adding multiple fields 174–175
  adding new fields 174
  anatomy of scripts 175–176
  passing data to scripts 176–177
  removing elements from arrays 173–174
  removing fields 174
  scripting languages 177
  updating arrays using scripts 173
scroll API 299
search 280–312, 397–433
  anatomy of requests 288–290
  anatomy of responses 290–291
  as the new normal 3–7
  clients 538–539
  databases
    search engines vs. 6–7
    search supported by 5–6
  features of 297–312
    highlighting 299–301
    manipulating results 307–310
    pagination 298–299
    relevancy scores 301–304
    searching across indexes and data streams 310–312
    sorting 304–307
  full-text search 334–360
    fuzzy queries 357
    match queries 340–345
    match_all query 338–339
    match_none query 339–340
    match_phrase query 345–346
    match_phrase_prefix query 346–347
    multi_match query 347–352
    overview 335–338
    precision 335–336
    query_string query 353–356
    recall 336–338
    sample data 338
    simple_query_string query 357–359
  functionality of 282–283
  fundamentals of 285–288
    _search endpoint 285–286
    execution context 286–288
  generative AI and 16–19
  location search 398–401
    bounding_box query 398–399
    geo_distance query 399
    geo_shape query 400–401
    geospatial data types 401–404
    geospatial queries 404–412
  overview 281–282
  performance and troubleshooting 498–502
    choosing keyword types over text types 501–502
    document modeling 499–501
    modern hardware 498–499
  Query DSL 294–297
    for aggregations 296
    for cURL 295–296
    leaf and compound queries 296–297
    sample query 295
  sample data 283–285
  search engines 7–9
    characteristics of 2–3
    databases vs. 6–7
    functionality of 8
    popular 8–9
  shape query 412–414
  span queries 414–421
    sample data 415
    span_first query 416–417
    span_near query 417–418
    span_or query 420–421
    span_within query 418–420
  specialized queries 421–432
    distance_feature query 421–426
    more_like_this query 427–428
    percolate query 428–432
    pinned query 426–427
  specifying analyzers for 263–265
    analyzers in queries 263
    default analyzer at index level 264–265
    order of precedence 265
    setting analyzer at field level 264
  structured data 4
  term-level search 313–333
    example of 314–315
    exists query 322–323
    fuzzy queries 330–332
    ids query 321–322
    not analyzed 314
    overview 314–315
    prefix query 327–330
    range query 323–325
    term query 316–318
    terms query 318–321
    wildcard query 325–327
  unstructured data 4–5
  URI request searches 291–294
    additional parameters 293–294
    searching for movies by title 292
    searching for specific movies 293
    supporting with Query DSL 294
