timed_out attribute 291
title attribute 292
title prefix 308
title property 22, 319, 330
to attribute 452
token filters 274–278
  shingle filter 275–276
  stemmer filter 275
  synonym filter 276–278
token_count data type 116, 120–122
tokenization 64, 238–239
tokenizers 270–274
  edge_ngram tokenizer 273
  ngram tokenizer 272–273
  standard tokenizer 270–271
tokens 64, 238
took attribute 291
top_left attribute 407–408
top_left coordinate 405–406
top_left geopoint 132
top_left parameter 407
top_secret_files index 323
top100_movies document 165
total attribute 217
total bucket 217–218
TRACE logging level 490
track_scores attribute 306
trades index 63
trainings index 129
Transform node role 84
transient property 196
true negatives 337
true positives 336
type attribute 403
type coercion 114–115

U

uax_url_email tokenizer 274
unique_tvs aggregation 444
unstructured (full-text) data
  overview 4–5
  querying 237
unstructured search 281
unstructured text 118
update action 185, 189
UPDATE method 171
update operation 40
updating documents 170–181
  _update API 171–173
    adding new fields 171–172
    modifying existing fields 172–173
  mechanics of 170–171
  replacing documents 177–178
  scripted updates 173–177
    adding conditional update scripts 175
    adding multiple fields 174–175
    adding new fields 174
    anatomy of scripts 175–176
    passing data to scripts 176–177
    removing elements from arrays 173–174
    removing fields 174
    scripting languages 177
    updating arrays using scripts 173
  update_by_query operation 180–181
  upserts
    overview 178–179
    updates as 179–180
uppercase filter 104, 243, 274
uppercase processor 526
uppercase token filter 260
Upsert (update and insert) operation
  overview 178–179
  updates as 179–180
URI request searches 291–294
  additional parameters 293–294
  searching for movies by title 292
  searching for specific movies 293
  supporting with Query DSL 294
UUID (universally unique identifier) 151

V

value_count aggregation 439
value_count metric 438–440
value_count metric aggregation 439
variance stat 443
version property 216
vertical scaling 97–98, 477

W

weight function 394
whitespace analyzer 236, 243, 251–252
whitespace tokenizer 238, 274
wildcard data type 124
wildcard query 325–327
Windows
  installing Elasticsearch 516–518
  installing Kibana 521
within relationship 411
WKT (well-known-text) point 402

X

Xms property 80
-Xms setting 491
Xmx property 80
-Xmx setting 491, 499
